

## Hinge Certification Stamp:

### Linac Door Hinges for Radiation Therapy, and the Complete Precision Engineered High Capacity Hinge Product Line

brookfield industries, inc. developed the **Heavy Duty, Precision Engineered High Capacity Hinge** product line almost 5 decades ago! We now feature this **Certification Stamp** affixed with our logo on hinges that are exclusively manufactured by us. This assures the customer is purchasing the **highest quality standards** in the industry, and certifies each hinge will meet our [Declaration of Hinge Capacities](#), and [Lifetime Warranty](#) as stated.

As a specifications writer, engineer, OEM, or end user, not only will our hinges be manufactured to the **highest quality standards** (*including internal components meeting aerospace specs and tolerances*), but also **properly engineered, proof tested, and load rated**. If your project requires an engineering evaluation for additional loading: such as wind, pressure differential, ultimate, seismic, or blast, we will run the necessary calculations, and recommend the proper hinge size. Upon request, we will provide a detailed stress analysis of all hinge components (internal and external) that can be submitted to government agencies or professional engineers for approval...**Don't risk purchasing an inferior product!**

**Caution:** You may see hinges in the market place that look similar on the exterior and feature the same load ratings as our product line. However, hinges without this **Certification Stamp**, have not been manufactured to our exacting standards, nor are they certified to meet our [Declaration of Hinge Capacities](#), and [Lifetime Warranty](#).
